

ALIVEDRIVE DESKTOP

Version 1.0.11**21 January 2026**

R1.0 FEATURES

- Windows 11 installer
- Support for Enhanced PDR system (PDR2.5) outing files from MY26- Corvette and MY25- Cadillac CT5-V (Circuit, autocross and dashcam outings)
- Display of basic outing properties including capture time/date, outing name
- Support for US, UK or Metric settings for speed and distance
- Appearance adjustments align to light/dark mode device settings
- Playback of single outing - whole outing or single lap
- Playback control using playback bar – play/pause/scrubbing
- Lap display and picker including fastest lap indicator
- Fastest lap selected by default when circuit outing opened
- Dynamic overlay support - App overlay choice matches vehicle
- Ability to toggle the overlay used for playback
- Full Outing Export - export of outing with baked-in overlay
- Exports are a background activity; other in-app tasks can be undertaken whilst the export is underway
- Single lap outing export
- Multi-lap outing export
- Filesize estimation for exports

KNOWN ISSUES

- For circuit outings, inlap and outlap are not displayed as distinct laps
- 369820: Export is not, by default, saving the exported file to same location as source outing
- 366771: The video is not muted/unmuted immediately when muted/unmuted whilst paused
- 369728: There is a small time difference between exported videos and the export preview
- 369978: Various clipping issues when system text size is increased

CHANGELOG

Version 1.0.11

Changes

- 370777: Upgrade to .NET 10

Fixes

- 369081: Different laps are shown the first time an outing is opened and subsequent launches
- 369082: Track map on overlay not shown on very first open of outing; requires cycle through overlays
- 369727: The final lap in the export video lap selector appears selected when switching between entire outing and selected laps

Version 1.0.7

First released version

COMPATIBILITY

The following operating systems are supported:

- Microsoft Windows 11 (64-bit)
