COSWORTH

Release Notes

ALIVEDRIVE DESKTOP

Version 3.0.60 macOS

7 October 2026

R3.0 FEATURES

Installation and Appearance

- macOS installer
- Check for updates built into the application
- Support for US, UK or Metric settings for speed and distance
- Explorer Bar for lap display and choice, including fastest lap indicator
- Flexible layout containers - ability to adjust relative sizes of video, map and graph
- Appearance configuration - ability to adjust visibility of the video, graph and map panels individually
- Display of outing properties including capture time/date, outing name, vehicle make/model
- Dynamic overlay support for PDR2.5 files - App overlay choice matches vehicle

Playback

- Support for PDR 1 , PDR2 and Enhanced PDR system (PDR2.5) outing file playback and export
- Playback of single outing - whole outing, single lap or multiple sequential laps
- Partial regions (inlap and outlap) can be displayed as distinct laps via a menu control
- Dual-outing playback (time-based and distance-based comparison modes)
- Fastest lap selected by default when circuit outing opened
- Playback control using playback bar and keyboard shortcuts – play/pause/scrubbing
- Playback control using Map panel
- Interactive map view for playback – map panel populated with track layout relating to Current outing to complement the video panels; ability to pan and zoom; ability to view segments
- Ability to toggle the overlay used for playback (PDR2.5 files only)

Track Management

- Handling of track files within the app via a tracks list – filter, sort, delete, bulk delete
- Import a track file and associate it with an outing
- Export track file – multiple formats
- Track Map Editing
- View/Edit Track Associations

Graphical, Statistical and Segment Analysis

- Graphical Analysis – graphical display of key groups of outing parameters to complement the video playback ; Speed, Brake, Throttle, Steering Angle, Time Delta, vehicle dynamics, vehicle powertrain
- Presentation of extended set of outing telemetry on a per lap basis
- Segment Analysis via extended sets of data per corner/straight

Outing Export

- Outing Export - export of outing with (for PDR2.5 files only) a choice of baked-in overlay
- Exports are a background activity; other in-app tasks can be undertaken whilst the export is underway
- Single lap, multi-lap, chosen time-clip or whole outing export
- Filesize estimation for exports

KNOWN INSTALLATION ISSUES AND WORKAROUNDS

Attempt to run the AliveDrive Desktop pkg package on an Intel-based Mac computer fails

The *AliveDrive Desktop-X.X.XX.pkg* file that is downloaded either via the Cosworth Member Portal or via an in-app update will successfully install on an older Intel-based Mac, but a subsequent attempt to run the application will not be successful – the application will not start.

Workaround

Users with Intel-based Mac devices need to instead install a build of the application specifically for X64 (Intel) architectures.

The *AliveDrive Desktop-X.X.XX Intel.pkg* is available as a separate download link. Users wishing to obtain the Intel package should contact alivedrive@cosworth.com to request the dedicated link for the download.

Upgrade from v2.2.37 to v3.0 will purge any previously imported tracks

The previous version of AliveDrive Desktop (v2.2.37) included the ability to import tracks for association with outings, but there was no concept in that version of managing these tracks as a database. The introduction of the track database and management of tracks in v3.0 has necessitated that the database be initially created with no tracks present, so that all tracks used can have a valid entry in the tracks list. Any tracks previously imported will need to be re-imported for v3.0

KNOWN ISSUES

- 380600: The first frame of an exported outing contains no overlay data
- 369728: There is a small time difference between exported videos and the export preview
- 382444: (macOS) PDR 1 recordings cannot be exported
- Multiple active instances of app is not yet supported in macOS version
- 394766: Graph groups scrollbar difficult for user to find when graphs go beyond container size
- 390407: Playback is not possible in the export window after cancelling an export
- 397533: (macOS) Graphs at the bottom of the graphs pane cannot be zoomed in/out
- 396617: Crash when opening the segment statistics dropdown after editing a track's start/finish line position

CHANGELOG

Version 3.0.60 (This version)

Changes

- Complex Graphs - extends the interactive chart view that displays core driver-performance channels to multiple groups of channels
- Corner Analysis - analysis specifically for corners and straights through presentation of segment specific statistics
- Track Management - handling of track files within the app. - Import, export, delete, filter, sort
- Track Map Editing
- Generate a track from an outing
- View/Change track associations
- Cursor manipulation via the map
- Appearance configuration - ability to adjust visibility of the video, graph and map panels individually

Fixes

- 390312: (macOS) The top of graphs can become clipped
- 390616: Crash when unloading the primary outing when reference is also loaded with a PDR2 track applied
- 390230: Y-axis titles are not presented well when height is constrained
- 393407: (macOS) Outings are not loaded when the Open With context menu is used for an outing in Finder
- 391182: (macOS) The track map zoom level cannot be changed with a mouse scroll wheel

Version 2.2.37

Changes

- Graphical Analysis
- Statistics display
- Interactive map view for playback with pan/zoom and segment display
- Flexible layout containers

Fixes

- 383801: (macOS) App cannot be opened from background after closing a completed export window
- 388319: Outings are not always aligned by distance
- 388182: Some PDR1/2 track files cannot be imported

Version 2.1.41

Changes

- Dual-outing playback (distance-based comparison mode)
- Map view for playback
- Track Import
- Improved check for app updates

Fixes

- 380889: The app freezes when lap selection is changed quickly during playback
- 382960: Clear selection is not disabled in current outing context menu when two outings are open
- 380981: Hours are not displayed in the explorer bar
- 382443: Outing information previews not updated when an outing is replaced with a legacy outing
- 373135: The export window does not load elements after reopening it several times
- 382312: Outing Properties Timestamp does not display for Legacy Outings
- 376161: (macOS) AliveDrive Desktop does not appear in the list of applications in the Finder "Open With" context menu
- 374080: (macOS) The default menu bar is displayed for the export video window
- 380686: (macOS) Crash when closing videos while playing
- 382821: (macOS) AliveDrive Desktop loses permission to open dragged and dropped outings located in non-Downloads folders when the app is quit
- 376163: No error dialog is displayed when an incompatible outing is opened via the file browser "Open with" context menu

Version 2.0.51

Changes

- Support for PDR 1 and PDR2 outing files
- Dual-outing playback (time-based comparison mode)
- Export of a chosen clip
- Multilap playback in single-video mode
- Enhanced outing properties display - filename, vehicle make/model, ...

Fixes

- 375821: (macOS) Export can be started when insufficient storage space in the selected location
- 374345: (macOS) Crash when the selected overlay is repeatedly changed during video playback

Version 1.1.38

First released version for macOS

COMPATIBILITY

The following operating systems are supported:

· macOS Sequoia 15.7.x	All app. versions since version 1.1.38
· macOS Tahoe 26.x	All app. versions since version 1.1.38
